## Chapter 2

# Project Size, Effort and Cost

### 2.1 Project Size

The purpose of this section is to estimate Function Points to give an estimation of the project size. We will use this Size Estimation Procedure:

- Determine the function counts by type: Count the number of functions for each Function Type.
- Determine the complexity level for each Function Type.
- Apply weights to the Function Types.
- Compute the Function Points for each Function Type.

Each subsection will take in account a different User Function Type. User Function Types are described in the following table:

<b>External Input (Inputs)</b>	Count each unique user data or user control input type that (i) enters the external boundary of the software system being measured and (ii) adds or changes data in a logical internal file.
<b>External Output (Outputs)</b>	Count each unique user data or control output type that leaves the external boundary of the software system being measured.
<b>Internal Logical File (Files)</b>	Count each major logical group of user data or control information in the software system as a logical internal file type. Include each logical file (e.g., each logical group of data) that is generated, used, or maintained by the software system.
<b>External Interface Files (Interfaces)</b>	Files passed or shared between software systems should be counted as external interface file types within each system.
<b>External Inquiry (Queries)</b>	Count each unique input-output combination, where an input causes and generates an immediate output, as an external inquiry type.

Table 2.1: Function Types

To determine the complexity level of each Function Type, it's used the following tables:

<b>For ILF and EIF</b>			
<b>Record Elements</b>	<b>Data Elements</b>		
	<b>1 - 19</b>	<b>20 - 50</b>	<b>51+</b>
1	Low	Low	Average
2 - 5	Low	Average	High
6+	Average	High	High

Table 2.2: External Inputs and External Interface Files complexity distribution

<b>For EO and EQ</b>			
<b>Record Elements</b>	<b>Data Elements</b>		
	<b>1 - 5</b>	<b>6 - 19</b>	<b>20+</b>
0 or 1	Low	Low	Average
2 - 3	Low	Average	High
4+	Average	High	High

Table 2.3: External Output and External Inquiries complexity distribution

<b>For EI</b>			
<b>Record Elements</b>	<b>Data Elements</b>		
	<b>1 - 4</b>	<b>5 - 15</b>	<b>16+</b>
0 or 1	Low	Low	Average
2 - 3	Low	Average	High
3+	Average	High	High

Table 2.4: External Inputs complexity distribution

To determine the weights for each Function type, the following table has been used (for each Function Type, a weight is assigned):

<b>Weights</b>			
<b>Function Type</b>	<b>Complexity-Weight</b>		
	<b>Low</b>	<b>Average</b>	<b>High</b>
Internal Logical Files	7	10	15
External Interface Files	5	7	10
External Inputs	3	4	6
External Outputs	4	5	7
External Inquiries	3	4	6

Table 2.5: Function Types Weights

#### **2.1.1 Internal Logical Files**

#### **2.1.2 External Interface Files**

#### **2.1.3 External Inputs**

#### **2.1.4 External Inquiries**

#### **2.1.5 External Outputs**

#### **2.1.6 Computation of Unadjusted Function Points**

#### **2.1.7 Fixing Unadjusted Function Points**
