

### 0.0.1 Presentation Tier

The purpose of this tier is to make the data and their changes visible to the user. Presentation Tier is also in charge to make the system functions available to the users according to their permissions (see the RASD to read about functionality differences between Customers and Taxi Drivers). This Tier represents the View of the MVC design pattern and it's composed by these components:

- **Web Application UI:** this component contain all the objects that the users need to communicate with the system, via web browser.
- **Mobile Application UI:** this component allow the user to communicate with the system in the best way. It contains all the necessary components to communicate with the system, displayed to the user in an application.
